OUR JOURNEY SO FAR

Inception: - Scholartude was founded on 23rd March 2018. We started our journey as an online web learning platform catering to 10th to 12th class students by providing personalised content to students. The aim was to provide quality content to students preparing for entrance exams. The learning platform was launched with a handful of courses, focusing on core subjects and interactive learning tools. Initial user feedback was positive, highlighting the platform's user-friendly interface and engaging content.

Expansion Of Business: - The company established partnerships with a few educational institutions with its B2B model to expand its reach across Vidharbha to cater maximum students at a very affordable cost to students.

Tough Times For Everyone: - Covid confined us to our homes where life took priority over business. We increased our reach further to students providing free video lectures to all students at no additional cost to ease the financial burden on parents. The goodwill we received during this time served as a motivation to keep us going.

Back With A Bang: - Post covid, we transitioned to develop a complete learning solution for kg to 12th class students by introducing ai assisted learning for all users. the learning application provided recorded video lectures in multiple languages, 25 lakhs+ question bank, unlimited custom test and previous year question papers, 24 by 7 doubt solving feature, a virtual laboratory and an online library with books for all entrance exam preparation.

The Next Big Step – Offline Coaching Classes – The academic session of 2024-25 will mark the launch of the offline coaching classes where the best of the online and offline learning worlds will combine to deliver a larger-than-life learning experience to students. On to bigger challenges going forward.
